

**Sonia Nath**

I am a postdoctoral researcher at Adelaide Dental, working in the Australian Research Centre for Population Oral Health and the Indigenous Oral Health Unit. My work primarily focuses on oral microbiome research and identifying links between oral conditions and systemic health.

My research expertise is evident through my authorship of over 40 peer-reviewed publications, which have garnered 700+ citations, reflecting my significant scholarly impact. I have a proven track record securing competitive research funding exceeding \$70,000 as Principal Investigator and hold an h-index of 15, underscoring my influence in the field. My leadership is further recognised by prestigious accolades such as the 2024 Hatton Award from the IADR and the 2025 Derek Frewin Early Career Researcher Award.

My involvement with the IADR started in 2021, serving as the Student/Trainee Representative (International) for the BEHSR group and as an abstract reviewer for IADR general sessions from 2022 to 2025, where I developed robust skills in organisation, communication, and event coordination. My active engagement with the IADR community through conference presentations and committee service, including the Giddon Award committee, has given me a clear understanding of IADR's mission and the importance of effective communication with both members and Headquarters. I am dedicated to supporting divisional events, ensuring timely and accurate dissemination of information, and fostering collaboration within the ANZ research community. My proven track record of reliability and commitment to excellence aligns well with the responsibilities of the Secretary role, and I am enthusiastic about contributing to the continued success of the IADR ANZ Division.
